

# Mass Stock Deletion

## Utility for the Removal of Unwanted Stock

The Mass Stock Deletion utility for Opera II module is designed to allow the removal of unwanted stock items, even though sales history records exist. The inclusion or otherwise is determined by the setting of a flag on each stock record, plus a setting at run-time that checks for any stock transactions newer than a selected date. The stock record will not be deleted if either of the criteria fails. All stock items that pass the criteria will be deleted from the main stock record and the linked warehouses, and will also be removed from sales history and supplier product details for purchase orders.

The image shows two overlapping software windows. The background window is titled "Stock Processing : CLEAN01 - Carpet Cleaner (2.5L)". It has tabs for "General", "Memo", "Extended Description", and "List". The "General" tab is active, showing fields for Description ("Carpet Cleaner (2.5L)"), Barcode, Search Ref. 1, Search Ref. 2, Sales Code ("CONS02"), Supply Code ("M310"), Category ("CONS"), Profile ("ITM1"), Sell Price ("5.99"), In Stock ("73.00"), Allocated ("0.00"), Free Stock ("73.00"), and Qty. WIP ("0.00"). A red box highlights a checkbox labeled "Not included in mass deletion" which is checked. The foreground window is titled "Mass Stock Deletion" and contains a warning message: "WARNING - Use this feature with care! This routine will remove all unused stock records within the following range:". Below the warning are radio buttons for "Stock Reference" (selected) and "Stock Category". The "From" field is set to "CLEAN01" with "Carpet Cleaner (2.5L)" and the "To" field is set to "ZACD007" with "Sony Stereo WX-C570R". A date field is set to "01/01/2005". The version "1.00" is shown at the bottom left, and "OK" and "Cancel" buttons are at the bottom right.
