

Helping you complete your AE jigsaw

We have an application that will help any company export data to their pension provider within Pegasus Opera II and Opera 3.

The utility enables all the data required by the pension provider to be collected from various locations in Opera, saving critical time and ensuring the correct information is sent.

The data export utility produces Csv files that can be easily uploaded to the pension providers via their web portal.

The Auto Enrolment Export Report settings are used to determine which of the Pension Providers to use within each Payroll Company. This makes it an ideal solution where multiple payroll schemes exist or for a bureau service. Multiple pay periods can be processed as set in the Payroll Options per Payroll Group, each creating separate output files.

At run-time the user can select which of the Payment Frequencies to run, using information gathered from the Payroll Calendar. Where required, data from a range of consecutive payroll periods can be merged together to form a single export. This is particularly useful for weekly payrolls where maybe a 4-5-4 reporting arrangement is in place.
